1. SITES

This product is to be used for the control of lepidopteran pests of stored products in Apartments, Bakeries, Commercial & Industrial Structures, Day Care Facilities, Food/Feed Manufacturing Facilities, Homes, Hospitals & Nursing Homes, Hotels/Motels, Kennels, Livestock operations, Meat Packing & Food Processing Plants, Mills, Pet Stores, Restaurants, Retail Establishments, Schools, Supermarkets, Transportation Equipment (buses, boats, planes, trains, trucks) and Warehouses

2. PESTS:

Almond moth [*Ephestia cautella*], Indian meal moth [*Plodia interpunctella*], Mediterranean flour moth [*Anagasta (Ephestia) kuhniella*], Tropical warehouse moth (cocoa moth) [*Ephestia cautella*], Tobacco moth [*Ephestia elutella*], Raisin moth [*Cadra figulilella*].

3. APPLICATION: Place dispensers every 20-40 feet at chest height along the perimeter of the area to be treated. Place additional dispensers on the interior support structures (target 1 dispenser every 500 - 1,500 ft<sup>2</sup>). Add new dispensers every 6 months [180 days] or when monitoring traps show increased captures. Dispensers may be left in place for 9-12 months to ensure all pheromone is utilized.

As promulgated at 40 CFR 180.1153 DO NOT EXCEED the rate of 3.5 grams pheromone per 1,000 square feet/year.

4. TIMING: Deploy after detection of stored products moths in pheromone monitoring traps. Dispenser will emit effective amounts of pheromone for 6 months [180 days].

NOTE:(i) This product impedes the mating of many species of stored product moths. If pest populations densities are excessively high, disruption of mating will be less effective. At high population densities insecticide applications are recommended to reduce populations to manageable levels.

(iii) Monitoring of male stored products moths using pheromone traps is recommended in treated areas. As a general rule, pheromone trap monitoring of other pest species should be done so that timely intervention is possible when warranted.
